

## What should I already know?

- Name common 2D shapes: **square**, **rectangle** (oblong), **circle**, **triangle**.

- Name common 3D shapes: **cube**, **cuboid**, **sphere**, **cylinder**, **cone**.

## Key Knowledge

Recognise and **describe** 2D shapes:

More 2D shapes:

Recognise and **describe** 3D shapes:

More 3D shapes:

**Vertical line of symmetry:**

**Repeating shape patterns:**

## Key Vocabulary and definitions

<b>two-dimensional shape (2D shape)</b>	A flat shape.
<b>three-dimensional shape (3D shape)</b>	A solid shape.
<b>side</b>	A line that joins 2 <b>vertices</b> in a 2D shape.
<b>edge</b>	Where 2 <b>faces</b> meet on a 3D shape.
<b>vertex</b>	A corner point, where 2 or more <b>sides</b> or <b>edges</b> meet.
<b>vertices</b>	More than 1 <b>vertex</b> (corner point) e.g., a <b>triangle</b> has 3 <b>vertices</b> .
<b>face</b>	A <b>flat surface</b> on a 3D shape.
<b>curved</b>	Rounded. (A <b>sphere</b> and a <b>cylinder</b> both have 1 <b>curved surface</b> ).
<b>line of symmetry</b>	A line that splits a shape into 2 equal parts. If you were to put a mirror on the line, the reflection looks exactly the same.
<b>vertical</b>	Something that rises straight up e.g., people stand up straight in a <b>vertical</b> position.
<b>pattern</b>	A sequence of repeated objects, shapes or numbers which follow a rule.

### Stem sentences:

This shape is a \_\_\_\_\_ because...

I know this shape is a \_\_\_\_\_ because...

The number of vertices a 2D shape has is \_\_\_\_\_ to the number of sides.

### Stem sentences:

I know that this is a line of symmetry because...

The 2D shapes that make up the faces of a \_\_\_\_\_ are...

\_\_\_\_\_ is similar/different to \_\_\_\_\_ because....
