

Hello Year 1,

We hope you are all well and keeping safe.

Here is an idea for a science lesson you could do at home.

In science lessons at school, Year 1 learnt about different habitats and thought about the animals they would find in each one. Below is a link to the BBC Bitesize website which has videos about all of the different habitats, to help refresh the children's learning.

<https://www.bbc.co.uk/bitesize/topics/zx882hv>

**** Activity idea****

Think of your favourite animal. What habitat does it live in? Can you draw your favourite animal and write a description about their habitat underneath?

This is Miss Welford's example below.

My favourite animal is a penguin.

They live in a cold habitat with snow and ice. They live in a place called Antarctica and it is so cold that people cannot live there.

Please feel free to upload any pictures of your children's work in the comments below. We'd all love to see how they get on.

The Year 1 Team. 😊
